The majority of these records come from the United States, where hummingbirds

From scientific literature, books, social media posts, and newspapers, they found that 12 different species of the insects in 13 different countries – on all continents except Antarctica – had been eating birds. Several alien species were introduced into the US in the late s as a form of biological pest control Credit: Tom Vaughan.

Some mantises in North America now seem to view hummingbird feeders as happy

says that mantises, which are sometimes introduced into suburban areas to control insect pests, might exact a significant toll on hummingbirds in these areas. In two reported cases, females feasted on birds while copulating with males.
