Five Senses: Facts (Science Trek: Idaho Public Television)

The senses gustation (taste), olfaction (smell), audition (hearing), equilibrium (balance), and vision represent the special senses. They are "special" because.

THE SPECIAL SENSES

A sense is a physiological capacity of organisms that provides data for perception. The senses and their operation, classification, and theory are overlapping.

Sense - Wikipedia

You generally experience the world through your five senses: vision, hearing, smell, taste and touch. Each of these senses require their own type of "perceiving".

Within the family Viperidae the pit organ is seen only in the subfamily Crotalinae: the pitvipers. Recent studies on lesions in the area concluded that rats with a damaged perirhinal cortex were still more interested in exploring when novel objects were introduced to the Senses, but seemed unable to tell novel objects from familiar ones—they examined both equally. We traditionally refer to the five senses of sighthearingtastesmelland touch -a schema that dates back to Aristotle. Learnhowyourcommentdataisprocessed.
